SANTIAGO PÉREZ LOSANOVSCKY

Game & Systems Designer | Level Designer | Unreal Engine

Buenos Aires, Argentina | santiagolovsky@gmail.com | linkedin.com/in/santiago-perez-losanovscky-a91877172

PROFESSIONAL SUMMARY

Game and systems designer with 7+ years of professional experience across game design, level design, gameplay systems, mobile and VR production, product ownership, and design leadership. Hands-on in Unreal Engine and Blueprints, with current independent work spanning systemic horror, exploration, narrative/environmental storytelling, FPS mechanics, combat systems, AI/gameplay logic, and level implementation. Strong at turning ambiguous creative intent into clear mechanics, spaces, documentation, and implementable content while collaborating across design, engineering, art, narrative, and QA.

CORE SKILLS

Game Design • Systems Design • Level Design • Technical Design • Narrative Design • Unreal Engine • Blueprints • Unity • Level Building & Scene Implementation • Exploration & Puzzle Design • Environmental Storytelling • Player Agency & Reactivity • AI / Behavior Trees / Navigation • Gameplay Prototyping • Documentation • Playtesting & QA

SELECTED PROJECTS

Hollow Graves — Independent Unreal Engine Horror Project | 2025–Present

• Own creative direction, game/systems design, level design, narrative/worldbuilding, investigation and clue design, UI/UX, data-driven content, enemy/gameplay logic, Blueprint architecture, balancing, documentation, and production planning.

• Developed a structured level-design pipeline that translates high-level game and narrative goals into design criteria, gameplay beats, set pieces, spatial diagrams, greyboxes, and iterative in-engine implementation.

• Design exploration spaces around player agency, multiple deduction paths, environmental storytelling, readable uncertainty, discovery, and systemic ghost behavior rather than forced sequences.

• Build and iterate gameplay directly in Unreal Engine using Blueprints, level scripting, UI/widgets, data-driven systems, and AI/gameplay logic; multiple prototype iterations completed and now progressing toward a vertical slice.

Drill to the Rend — Independent Unreal Engine FPS / Survivor Prototype | 2025

• Designed and built a solo playable prototype featuring adaptive enemies, Behavior Trees/navigation, weapon switching, elemental combat, spawning systems, progression/upgrades, UI, configurable encounter waves, and a boss encounter.

• Structured enemy and encounter systems for extensibility, using adaptive defenses and elemental counters to create readable combat decisions and rapid tuning opportunities.

PROFESSIONAL EXPERIENCE

Aconcagua Games — Product Owner / Lead Game Designer | May 2022–Sep 2024 | Argentina

• Led game design and product ownership across multiple 2D mobile titles, including the publicly released Fulbo Galaxy and unannounced sports, racing, puzzle, survival, and strategy projects.

• Owned gameplay and systems design across mechanics, controls, game feel, progression, stats, upgrades, difficulty, scoring, rewards, tutorials, level structures, balancing, and monetization-related design.

• Designed and balanced level content, established representative levels and production guidelines, led a small Game/Level Design team, and reviewed implemented content before client delivery.

• Produced GDDs, feature specifications, UX/UI references, balance sheets, and level-design documentation; worked hands-on in Unity and coordinated programming, art, QA, and production across multiple concurrent projects.

Pixowl — Match Island — Game Designer — Match-3 & Level Design | Feb 2021–Jan 2022 | Buenos Aires / Remote

Previously: Level Designer (Freelance), Sep 2020–Feb 2021

• Combined hands-on level design with mechanics design, progression, tutorials, balancing, and high-volume content production for a public mobile Match-3/city-builder.

• Created scalable level-design terminology, standards, and production guidelines; coordinated external providers and supported up to three level designers through briefs, reviews, validation, and balancing.

• Built, reviewed, and playtested content in Unity and proprietary tools, iterating difficulty and progression with player-testing data while collaborating with programming, art, QA, and the wider design team.

Image Campus — Professor — Game Design | Apr 2022–Present | Buenos Aires, Argentina

• Design and teach original curricula across Game Design, Systems Design, Level Design, Unreal Engine Blueprints, and Game Prototyping, with hands-on implementation and player-centered design at the core.

• Created an Unreal Engine Prototyping Laboratory that expanded into a year-long learning path; teach Blueprint scripting, gameplay systems, AI Behavior Trees/navigation, Animation Blueprints, UI/widgets, interfaces, materials, level building, and prototyping.

• Mentor students through concept, scope, iteration, technical implementation, documentation, playable prototypes/MVPs, portfolios, and early career decisions.

Fin Del Mundo Games — Creative Director | Nov 2021–Present | Argentina

• Lead independent original game development from concept through prototype, combining creative direction, game/system design, level design, narrative, production, documentation, and hands-on Unreal Engine implementation.

• Directed multidisciplinary collaborations of up to approximately 16 contributors across design, art, and development, mentoring junior contributors, defining workflows, reviewing work, and maintaining project vision.

PROFESSIONAL EXPERIENCE (Continued)

VR Health — Lead Game Designer — Pro Bono | Oct 2020–Jun 2021 | Argentina

• Led the creative redesign of a therapeutic VR initiative developed with Hospital Italiano de Buenos Aires, translating therapist requirements into gameplay, narrative, level design, and player-experience decisions for cognitive and sensorimotor rehabilitation.

• Served as primary designer/documentation lead in a multidisciplinary team, designing around accessibility, patient-specific constraints, comfort, cognitive/motor demands, and specialist validation.

Independent Game Studio — Lead Game Designer / Producer / ScrumMaster | Jan 2019–Sep 2020 | Buenos Aires, Argentina

• Co-founded a six-person team developing a narrative-driven 2D/3D PC platformer in Unreal Engine; led game design/documentation, built early level-design work directly in engine, and managed backlog, sprint planning, scope, milestones, and reviews.

COTO CICSA — Game Designer | Apr 2019–Nov 2019 | Greater Buenos Aires, Argentina

• First paid game-industry role: game design, level design, and QA for a multiplayer VR game for children, developed in Unity for Oculus hardware.

Independent — Author & Writer | 2009–Present | Argentina

• Write and independently publish original fiction focused on worldbuilding, narrative structure, dialogue, character, and horror; apply long-form writing experience to game lore, environmental narrative, and in-world text.

EDUCATION & TRAINING

Tecnicatura Superior en Animación 3D para Videojuegos — Image Campus | Mar 2025–Present
Experto Universitario en Programación con Unreal — Centro de e-Learning UTN FRBA | Feb–Jul 2025
ScrumMaster — Liqueed | May–Aug 2024
INMERSIVAS: Diseño de Interacción 3D en Realidad Virtual con Unreal Engine — Image Campus | 2020–Jan 2021
Trayecto de Game Design — Image Campus | 2018 (one-year program)
